

ATHEROS®
There is Here.

Atheros, Shanghai, China Welcoming individual contributors to a world-class team

Atheros Communications (www.atheros.com) is a fabless semiconductor company that delivers the technologies that keep people connected – to each other and to the world around them. Atheros' highly integrated chipsets provide wired and wireless connectivity for the world's leading brands of PCs, consumer electronics, networking devices and mobile handsets. Headquartered in California's Silicon Valley, the company was founded in 1998, went public in 2004 and is now one of the fastest growing silicon vendors. Although past the start-up phase, Atheros is still a place where individuals can make significant contributions, and employees feel like they are part of something big. Because Atheros is involved in so many exciting markets, you will be exposed to some of the hottest new products and technologies – right from the beginning of your career at Atheros.

With offices throughout the world, Atheros also appreciates ethnic and cultural diversity. Atheros established its Shanghai, China operation in May of 2005. The company is located in Zhangjiang High-tech Park, the region's technology hub. This area is widely known for having China's largest concentration of semiconductor companies, and is the site of many of the world's leading R&D centers for chip design, development and production.

Atheros' Shanghai operation is a fully-operational research and development center. Here, we continue to cultivate a strong engineering organization that now numbers over 300 – to support the entire Asia Pacific region, including Korea, Japan and Taiwan. Our highly skilled engineers work on a wide array of projects from conception to completion – investigation, specification, development and product release – as well as applications engineering support. The organization supports the breadth of the growing Atheros product portfolio – including WLAN solutions for home, office and mobile, Powerline (PLC), PAS/PHS, Wireless Network Processors, Gigabit and Fast Ethernet, GPS and Bluetooth solutions.

Atheros is that rare kind of company that combines an appreciation of individual contributions with supportive teamwork. You'll experience this right away as you get working on advanced wired and wireless products that appear on retail shelves worldwide within a short matter of months.

You'll work with, and learn from, the industry's best and brightest people who, in turn, will look to you for fresh approaches and new ideas. You'll see that our passion for excellence and connectivity know-how has resulted in a can-do culture where we focus on solutions, not problems.

Our matrixed organization, with minimal hierarchy, provides a spectrum of growth opportunities. And, we promote from within so you'll enjoy the fruits of your discoveries and accomplishments. The Atheros culture offers abundant opportunities for travel, professional networking and customer relationship building.

Join us and take charge of your future.
A recognized contributor to a world-class team!
